

Solve the systems of linear equations.

$$\begin{cases} 2x - 11y = 21 \\ 3x + 11y = 4 \end{cases}$$

$$\begin{cases} x - 2y = -7 \\ -5x - 4y = 1 \end{cases}$$

$$\begin{cases} 2x - 8y = 16 \\ -5x + 6y = 2 \end{cases}$$
