Algebra 1 Quiz 10.11.13 Stellar Solver <u>Key</u> version B 1) Simplify: 3(4x+2) = 5(x-3) 12x+6 - 5x+157x+21

2) Graph the system linear equations and identify the solution

$$-3(-3x + 7y = -16) \rightarrow 9x - 21y = 48$$

$$-9x + 5y = 16 + -9x + 5y = 16$$

$$-3x + 7(-4) = -16$$

$$-3x = -16$$

$$-3x = -16$$

$$(-4, -4) = -4$$

$$(-4, -4) = -4$$

4) Down on the Farm: Old McDonald had a farm, E-I-E-I-O. And on that farm he had some ducks and sheep. There are 20 animals on the farm and 56 feet. Write a system of equations that would enable you to find the number of ducks and the number of sheep that are on Old McDonald's farm. Then use your equations to find out how many ducks and sheep are on the farm.

BONUS!!! Graph your system of linear equations on the back and find the solution graphically.

5) Perimeter Question: A rectangle garden has a width of 3x - 4 and a length of 5x + 2 and a perimeter of 76 feet. What is the length and width of the garden to the nearest foot?

(x=5)

2(3x-4) + 2(5x+2) = 76 6x-8 + 10x + 4 = 76 16x - 4 = 7616x - 80

length = 27 feet width = 11 feet
