

Topic: (mini lesson) re-writing expressions

Objective: re-write using only addition and multiplication

$$\textcircled{\text{ex}} \quad 12 - 5 \rightarrow 12 + -5$$

$$\textcircled{\text{ex}} \quad \frac{21}{3} \rightarrow \frac{1}{3} \cdot 21$$

$$\textcircled{\text{ex}} \quad \frac{15}{5} - 4 \rightarrow \frac{1}{5} \cdot 15 + -4$$

$$\textcircled{\text{ex}} \quad \frac{x}{4} - 12 \rightarrow \frac{1}{4} \cdot x + -12$$

$$\textcircled{\text{ex}} \quad \frac{x+4}{2} \rightarrow \frac{1}{2} \cdot (x+4)$$
